

# SIMEX

## Protects Clinicians & Patients From Cross-Contamination And Other Infectious Diseases

**AVAILABLE NOW**

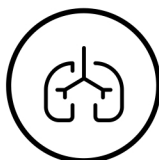

## The Only FDA-Cleared Automated Subglottic Aspiration System

*SIMPLE, SAFE, EASY TO USE*

### Helps Protect Clinicians

Simex integrated self-contained collection canister helps prevent cross-contamination. Patients intubated with endotracheal or tracheostomy cannulas collect highly contaminated secretions above the ballooned cuff which leaks out and may infect clinicians and caregivers.

### Reduces Patient Ventilator Days

By being able to remove **10x more secretions** compared to other aspiration methods, it helps provide better patient outcomes and quicker recovery time.

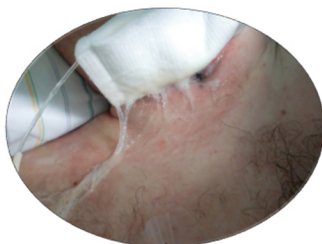

### Helps Reduce Ventilator Infections

By minimizing and eliminating micro-aspiration of secretions into the lungs using safe automated subglottic suctioning, the device is able to reduce the risk of pneumonia, ARDS, and patient mortality.

#### Before Simex

High risk of cross-contamination

#### After Simex

Clean stoma, low risk of cross-contamination.
